

Oily WW Processing Facility

This is the result of our Floccin 1105 product treating a sample from an oily wastewater treatment facility. As you can see, the Floccin 1105 was very effective at clarifying the waste as well as capturing all of the oil. These results were achieved with no pH adjustment and minimal Floccin addition (~ 1g/1000ml).

The client is going to purchase and install a CFU-20 to treat their 6,000 gallons/day and will either reuse the water for washing parts and equipment or discharge to the local POTW.
