

Potato Salad Manufacturer

The manufacturing of potato salad creates a high BOD and Fats, Oil & Grease wastewater that was costing over \$6,000/month in surcharges to treat by the local POTW. The facility investigated the use of the Floccin product and found that Floccin-H removed over 90% of the TSS and 80% of the BOD, thereby decreasing the surcharges to the POTW from \$6,000/month to \$1,500/month. The facility treats 15,000 gallons/day and uses only 80 lbs/day of Floccin-H.
