

Produced Water

This sample is representative of the produced water from the Colorado oil patch region. The sample contains free and emulsified oil, dirt, and water. The water is very saline (high in dissolved solids especially chlorides and sodium) which is common in this industry.

The sample pH was measured to be 6.8. Floccin 1105 was used at a dosage of 0.8 grams/1,000 ml which is a dosage of 6.7 lbs per 1,000 gallons. The jar testing results are in the photo below:
