

DAF Pilot

The DAF Pilot (Dissolved Air Flotation) is used to demonstrate the onsite treatability of customer's wastewater. The unit requires 30 amps at 480volts to operate (8GA 4-wire extension cord). The unit operates automatically, treating, filling and skimming, then repeating as long as there is water in the sump to be treated. The DAF pilot has two separate Mixing Tanks a built in Floccin Feeder and variable speed controls for the skimmer, the feeder and the mixers. This unit is capable of 10-25 GPM, depending on the % solids in your wastewater.
